

What are ' Gaps in Health Care' ?

Gaps in Health care are those steps that should have been taken to optimize care for a patient but were not, putting the patient / Employee at a higher risk of suffering from acute complications that take them to the emergency room. Gaps in Medical care also lead to chronic complications like Blindness, Heart attack, Stroke or kidney failure. ARAM works with the patient and the provider to address those gaps in health care thus preventing or delaying these complications.
